Gigamind Kindergarten and Children's House
Overview and Philosophy

Gigamind practises an inspiring pedagogy aiming to stimulate the development of children’s "multiple intelligences" and develop their potential to the fullest extent. We emphasize forging a scientific mind so that children will form the habit of searching for truth and mastering technology in the future. Through artistic creation, we help children develop their capabilities in both imaginative and creative domains, injecting a new vitality into the knowledge domain.

Through Christianity religious and moral education, we nurture a positive view on life for children and instil in them gratitude, love and forgiveness which are fundamental to building a peaceful society. The convergence of science, art and religion is the source of creativity in the 21st century and is also the driving force for children to take on the challenges brought about by the technological world.
Curriculum Features

- In line with the holistic development of children, the school designs the curriculum with an aim to foster their "multiple intelligences", which covers physical strength, social skills, logics, spatial concepts, music, self-reflection, exploration of nature and linguistic skills, all of which are interdependent and interconnected to one another.

- The curriculum is child-based and is carried out in interactive ways to allow children to learn in a joyful atmosphere.

- Inside each classroom are several activity corners to allow the children to take the initiative to explore and create in a happy and open environment.

- The curriculum also aims to enhance children's learning skills, restructure their experiences, and construct knowledge for building a firm foundation for their future learning.

Campus Environment

The campus is designed to meet the developmental needs of the children in order to enhance their 'multiple intelligences'. With a commitment to help develop the children's physique, the school has set up outdoor and indoor gyms for training their gross motor skills. The gyms are spacious and amply equipped with the latest gadgets or tools e.g. rock-climbing walls for strengthening children's patience and endurance. The classrooms are of an open design. Inside are various activity corners that allow the children the opportunity to explore their surroundings and to arouse their inquisitive nature.

Teaching Staff

All our teachers not only have received professional training in early childhood education, they are also experienced and versatile in different skills with a rich knowledge of children's mental and physical development and learning needs.
Instructional Medium

We attach importance to training children’s language ability. Through systematic training in reading and speaking skills, we help children communicate effectively and think logically. We also attach importance to the English language learning, therefore the school provides both mainstream section and bilingual section.

Three’s to five’s program:

Mainstream section
Cantonese as medium of instruction, English teacher visits classroom every day and Putonghua teacher visits classroom twice a week.

Bilingual section
Our classes are Bilingual Cantonese/English from 3’s to 5’s. A Cantonese and English teacher work collaboratively to expose the children equally to both languages. Putonghua teacher visits classroom twice a week.

Two’s program:
Cantonese as medium of instruction and English teacher visits classrooms everyday.

Parental Involvement

Parents are expected to adopt our education philosophy, maintain good communication and close co-operation with the school for the children’s benefit. Gigamind keeps in contact with parents through various ways, such as family day, parent interview day, seminars and curriculum introduction and monthly newsletters.
Admissions
Eligible for Pre-Primary Education Voucher Scheme
